`COMMAND: LIMITS` -> Specify the lower left and upper right corners to define workspace boundaries.

Step-by-Step AutoCAD House Design Tutorial

This section outlines a structured approach to creating a basic house plan, emphasizing practical techniques and best practices.

1. Creating the Base Floor Plan

The foundation of any house design is a precise floor plan:

- Drawing External Walls: Use the `LINE` or `RECTANGLE` command to outline the perimeter. For curved walls, `ARC` or `POLYLINE` with arcs can be employed.
- Wall Thickness: Offset the external walls inward or outward using the `OFFSET` command to represent wall thickness (commonly 150mm to 300mm).

Example:

`COMMAND: OFFSET` -> Select wall thickness -> Click on the outside boundary to create the inner wall.

- Adding Internal Walls: Draw interior partitions similarly, ensuring proper placement and dimensions.

2. Incorporating Doors and Windows

Accurate placement of openings enhances both functionality and aesthetics:

- Doors: Use pre-drawn door blocks or create custom door symbols. Place them at appropriate wall positions, ensuring they swing correctly.
- Windows: Similar to doors, insert window blocks, adjusting their placement to align with external walls.

Tip: Maintain consistent spacing and sizes for uniformity.

3. Adding Structural Elements and Fixtures

Further detailing involves:

- Stairs: Draw staircases considering rise, run, and headroom. Use `POLYLINE` for treads and risers.
- Furniture and Fixtures: Insert blocks for kitchen units, bathroom fixtures, and built-in furniture to visualize space utilization.
